

The perfect sock for use with clubfoot braces and other short leg Ankle Foot Orthosis (AFO)  
 Double layered like those used by long distance runners to prevent blisters and sores  
 Extra leg length  
 Stretchable cotton rich fibres provide a wrinkle free, close and comfortable fit  
 Anti-slip dots to avoid accidents when worn around the house

"They are great! The double layers really help to protect his little feet in the boots. His blisters are going away and I can tell he is much more comfortable."  
**Vanessa, mum to 3 month old boy**

Black Robin Designs

### **Conventional sock**

Friction between shoe, sock and skin results in shear forces that aggravate soft tissues and cause blisters

### **Black Robin double layered sock**

The outer and inner sock layers move freely over one another. Shear forces between the skin and soft tissues are minimised eliminating the cause of blisters
